EDUCATION

VSchool, Utah — *Full Stack Immersive*

August 2016 - Present

Utilized Node, Express, AngularJs and Mongodb to build scalable robust data driven APIs. Managed version control using Git with repos located on Github. Performed Unit tests using Jasmine. Used Agile and Scrum methodologies to manage team projects.

Monroe College, New York City — *A.A.S. in Information Technology*

April 2010 - April 2012

Learned the fundamentals of databases, simple software design, cisco networking and computer forensics.

EXPERIENCE

Showtime on the Piers, New York City — *Electrician*

January 2013 - March 2016

Overhauled and improved the inventory system. Executed plans and prioritized the more important tasks while consistently beating deadlines. Efficiently managed groups of up to five helpers and ensured customer satisfaction. Tested, prepared and hung lights from truss. Operated heavy machinery.

Giggle, inc., New York City — *Stock Person*

May 2012 - Dec 2012

Optimized inventory system and cut product procurement times by 70%. Streamlined merchandise receiving system; cut the number of employees needed to receive and stock merchandise in half. Assembled furniture and strollers, and fulfilled product orders.

SKILLS

JavaScript, Jquery, AngularJs

Lodash, JSON, NodeJs

Express, Mongodb, Mongoose

Restful APIs, Git, GitHub

Command Line, Jasmine, HTML5, CSS3, BootStrap

CRUD functionality, Agile

LANGUAGES

English and Spanish

Muzik — *Listen to snippets, favorite them and buy*

Muzik is a music app that consumes the itunes api. You can search for a song or an artist and listen to 30 second snippets of your favorite music. Speaking of favorites, you can "star" your favorite snippets and view them all later in a separate list. I made Muzik using the MEAN Stack and twitter bootstrap.

Express — *speak your mind or comment on someone else's thoughts*

Express is a simple forum where you can post about anything at all and see if people agree with you or disagree with you. They'll let you know by the amount of upvotes you have, or the nature of their comments. I made Express using the MEAN Stack and twitter bootstrap.

Forget Me Not — *This isn't just any todo app, it's the todo app*

Forget Me Not is an app that let's you create and manage todos. It also allows you to add a deadline to it. You will get a calendar notification and email notification at intervals of your choosing until the deadline. Yes, it's annoying but it's meant to be!
